Objective: Implementing and Testing a Web Application and API Service Using Apache Maven and Spring Boot

The objective of this lab is to design, implement, and test a web-based Binary Calculator using Spring Boot and Apache Maven. Through this lab, students will:

1. Develop a Web Application
 - Create a web-based binary calculator using Spring Boot.
 - Implement a user interface to perform binary operations such as addition, multiplication, AND (&), and OR (|).
2. Implement API Services
 - Design and implement RESTful API endpoints to handle binary operations programmatically.
 - Return results in both HTML views and JSON responses.
3. Use Maven for Project Management
 - Learn how to configure dependencies using the pom.xml file.
 - Use Maven commands to build, test, and deploy the application.
4. Write and Execute Unit Tests
 - Develop JUnit test cases for both the web application and API services.
 - Verify correctness using automated testing and ensure robust functionality.
5. Deploy and Validate the Application
 - Run the application locally on Tomcat (Spring Boot embedded server).
 - Perform manual and automated testing using web browsers and API calls.

By the end of this lab, I will have a fully functional, tested, and deployed web-based binary calculator with API capabilities, following industry-standard best practices in Spring Boot development and software testing.

The following test cases were executed to verify the functionality of the binary calculator.

<u>Test Case Name</u>	<u>Target Class</u>	<u>Function Test</u>	<u>Purpose</u>
testAddition	BinaryControllerTest	POST / with +	Ensures binary addition works
testMultiplication	BinaryControllerTest	POST / with *	Ensures binary multiplication works
testBitwiseAnd	BinaryControllerTest	POST / with &	Ensures bitwise AND operation works
testBitwiseOr	BinaryControllerTest	POST / with `	`
testMultiplyAPI	BinaryAPIControllerTest	GET /multiply	Tests API multiplication

testANDAPI	BinaryAPIControllerTest	GET /and	Tests API bitwise AND
testOrAPI	BinaryAPIControllerTest	GET /or	Tests API bitwise OR

Conclusion

All test cases executed successfully, and the application is fully functional. The screenshots above demonstrate the correct functionality of the binary calculator web application.
